

SMS Callback

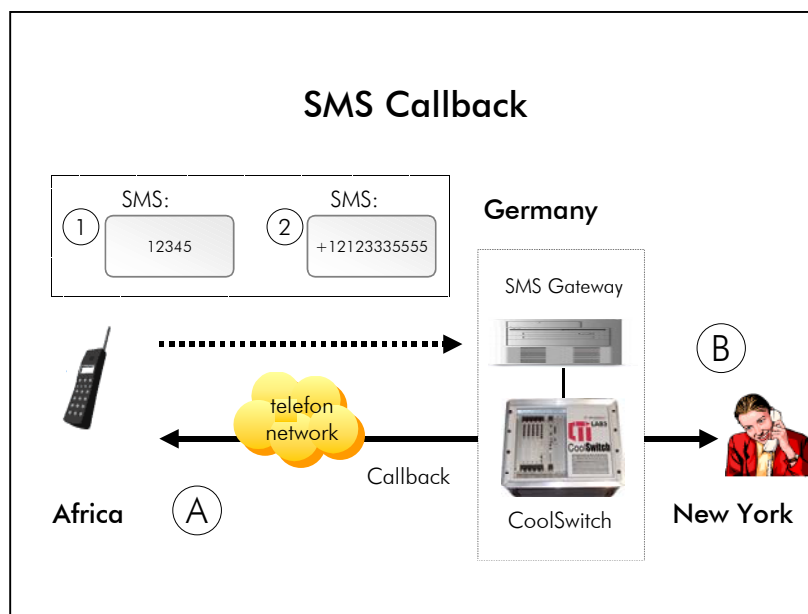

Innovative Services

SMS Callback is similar to the traditional Callback: users receive a callback, allowing them to make international calls at lower rates. This solution gives users the ability to launch voice calls simply by sending an SMS text message from their mobile phone. The SMS message contains user specific information such as a PIN number and/or phone number. You can offer the service via calling cards. The calling cards contain a PIN number and the number to access the SMS Gateway.

Advantages:

- Charging of the Mobile calls at the tariffs of a fixed line call
- Decrease of the Roaming costs
- Transfer of A-user phone number
- Worldwide distribution of the service (GSM required)

The end-user can, by using a single web-interface, check his call listing and his credit. A customizable billing solution enable service providers to control all their customer management and billing functions from provisioning to invoicing.

Fonctions:

- User-friendly installation of the SMS Gateway
- Support of numbers' translation
- Access for the Resellers to the information via Internet
- Customer management via web interface.

SMS Callback:

(1) The mobile user should first register : He sends an SMS text message containing his PIN number to the Gateway. He will receive a confirmation that he has been registered.
 (2) To initiate a call, the mobile user sends an SMS containing the desire number to call. Within seconds, the platform in Germany calls the registered user back (A) and connects him to the party he wishes to call (B).
